

**Title:** Experiments Management Engineer

**Position number:** 0018

**Description:** A dynamic startup in the field of alternative energy (clean tech) seeks an Experiments Management (EM) Engineer to manage and execute field and laboratory tests. The EM Engineer will be responsible for designing, building and executing tests in order to verify system performance. In addition he will need to find test sites and coordinate their use with the statutory authorities. The EM Engineer will also write technical reports and supervise sub-contractors.

**Requirements:**

- Character: We seek highly creative individuals motivated to excel
- Education: B.Sc. in Aerodynamics / Mechanical Engineering (Optionally - Practical Engineers in the field of mechanics / electricity / control with relevant experience)
- Demonstrated experience in executing field and lab tests involving electromechanical systems
- Experience in writing technical reports
- Experience in operating measurement equipment
- Proven skills in coordinating people and resources and in measuring systems performance
- Highly technical
- Self motivated and self-sufficient
- Team player with very good interpersonal skills
